DON'T MISS OUT ON THE MOST IMPORTANT ENVIRONMENTAL EVENT OF 2002!

Purpose and Objectives

On September 18-20, 2002, over 20 major national environmental policy organizations, trade groups, and government agencies will convene the 2nd annual *Environmental Innovations Summit* to showcase leading innovations in environmental management in a variety of sectors of society. Innovations have been researched and validated by the Summit's planning committee and will be presented as case studies so all attendees can learn and build upon the innovations in their own organizations. The Summit is the only national event that will bring together all levels of government, the private sector and the non-governmental community in a collaborative setting to examine and promote performance-based strategies to improve environmental protection**. For more information on registering, exhibiting, or participating, please call Bill Chen at 703 519-6270 x206, or email at chen@performanceweb.org.**

Agenda and Keynotes

The Summit is designed to include five specialized tracks, each addressing a unique aspect of environmental and energy efficiency:

- Environmental Management Systems
- Innovative Regulation and Partnerships
- Innovative Environmental Technologies
- Environmental Information Systems
- Measuring and Improving Performance

These tracks tackle the entire spectrum of environmental and energy efficiency issues, ranging from EMS and ISO-14000 systems to the measurements, process redesign strategies and technologies to improve environmental performance. During the conference, EPA will provide attendees with "latest news" on regulations and initiatives being launched by the agency.

With keynote addresses by the Hon. Christine Todd Whitman, Administrator, US Environmental Protection Agency; Hon. Spencer Abraham, Secretary, Dept. of Energy; Sen. Bob Smith, Chairman, Senate Environment and Public Works Committee; and Rep. Sherry Boehlert, Chairman, House Science Committee.

Program Sponsors

The Summit is supported by and coordinated by some of the most reputable and dedicated environmental policy organizations. What other event has garnered the active support and co-sponsorship of twenty-eight leading environmental policy and trade association groups (including the National Association of Manufacturers, US Chamber of Commerce, American Society for Quality and the Registration Accreditation Board.) This unprecedented and impressive level of stakeholder support has resulted in the creation of an event with significant credibility. Hands down, no other environmental event enjoys the broad and credible amount of support that we have achieved.
